

Crystal Engineering of Acentric and Chiral Coordination Networks

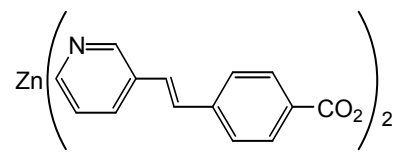

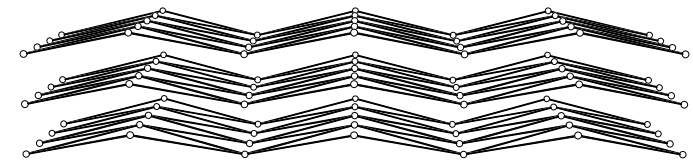

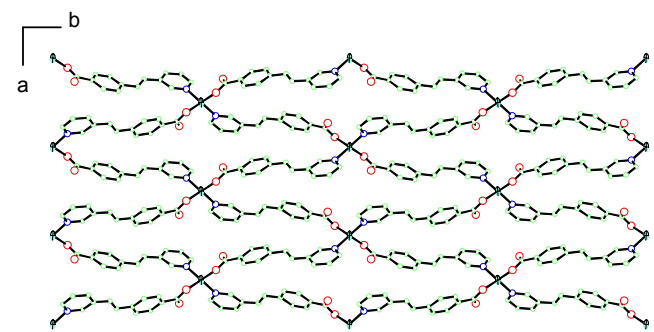

Wenbin Lin, University of North Carolina at Chapel Hill, DMR- 9875544

Chiral space group: $P4_32_12$

Polar space group: $Fdd2$

Chiral space group: $P2_12_12$

Polar solids have been successfully designed based on two-dimensional grids, and some of them exhibit second-order nonlinear optical coefficients higher than lithium niobate.

Crystal Engineering of Acentric and Chiral Coordination Networks

Wenbin Lin, University of North Carolina at Chapel Hill, DMR- 9875544

- Postdoctoral Training: Dr. Ponnaiyan Ayyappan, Dr. Yong Cui, Dr. Zhiyong Wang, and Dr. Banu Kesanli**
- Graduate Student Training: Dr. Aberdeen Allen* (Colgate-Palmolive Co), Dr. Owen R. Evans (postdoc at UC-Berkeley), and Helen L. Ngo**
- Undergraduate Student Training: David R. Manke (MIT), Gergeley Sirokman (MIT) Estee Nagar** (Univ. New Hampshire), Mary E. Chapman (MIT)**, Nissan Siegel (Ga. Tech.), and Nathan West (UNC-CH)
- High School Student Training: Andrea Locke*, ** and Lynn Tran**
- Course Development: Environmental Chemistry, Inorganic Chemistry, Organometallic Chemistry, and Physical Inorganic Chemistry
